# Responsive product carousel

We need a responsive product card carousel to be made in html, CSS & JS (jquery)
No CSS framework !

Touch slider ability, Mobile friendly , invinite (no snapping back to no.1)

The product box design is provided as html ,CSS&JS in the attachments

Steps of work

1. adjustments in the product card
2. creating carousel

# 1.adjustments in the product card

The product card is the item which will contain particular product information.
The code of the product card is almost ready. It need some adjustments

The product card includes a shopping incrementer
we need :

- when increasing amount more than one the minus button shall appear green
 (alike the plus-button)

On the right left side of the incrementer is a grey stopwatch

- the icon needs an on-off **checkbox function**
  - changing the icon to a different ()
  - switching the color from grey to green
    watch below Topic icons:

Topic icons:

(PET)

BLE ⏱   **10,08 €**

⏱   -   1   **+**   ⏱

ce Orange
odos los articulos   ⏱

the stopwatch is a placeholder for a svg icon.
yqb-green is the color definition for that icon
html

```
<span class="HAstopwatch yqb-green"></span>
```

CSS

```
.HAstopwatch:before {
  content: "\e952";
}

.yqb-green {
  color: rgba(87, 162, 0, 1);
}
```

colors → yqbgeneral.css
icons → iconset.css

After those adjustments the product card should be fine

2.Creating the carousel

the carousel properties have in 2 different responsive stages

1. min-width: 600px
2. max-width: 599px

1.min-width: 600px

*view width 1600px*

view width 1200px

Right and left of the slider are the slider button . Those includes a gradient layer which creates the illusion of disappearing product cards.

The gradient layer shall in any width not overlapp into the central product card !

max-width: 599px

switching to mobile view (max-width: 599px)
- gradient layers display: none
- product card extents its size to width: 100% (watch provided code)
- the slider buttons slightly adjust left and right into non-screen territory

view width 300px
